**EXPERIMENT NO:** 10 DATE: 21-09-24

REGISTER NO: 231501057 NAME: HARISH KUMAR V

## AGGREGATING DATAUSING GROUP FUNCTIONS

## **Find the Solution for the following:**

Determine the validity of the following three statements. Circle either True or False.

- 1. Group functions work across many rows to produce one resultper group. True/False TRUE
- 2. Group functions include nulls in calculations. True/False FALSE
- 3. The WHERE clause restricts rows prior to inclusion in a group calculation. True/False FALSE
- 4) Find the highest, lowest, sum, and average salary of all employees. Label the columns Maximum, Minimum, Sum, and Average, respectively. Round your results to the nearest whole number

SELECT ROUND(MAX(salary)) AS Maximum, ROUND(MIN(salary)) AS Minimum, ROUND(SUM(salary)) AS Sum, ROUND(AVG(salary)) AS Average FROM employees;

5) Modify the above query to display the minimum, maximum, sum, and average salaryfor each job type.

SELECT ROUND(MAX(salary)) AS Maximum, ROUND(MIN(salary)) AS Minimum, ROUND(SUM(salary)) AS Sum, ROUND(AVG(salary)) AS Average FROM employees join department

on department\_idept\_id = employees.department\_idgroup

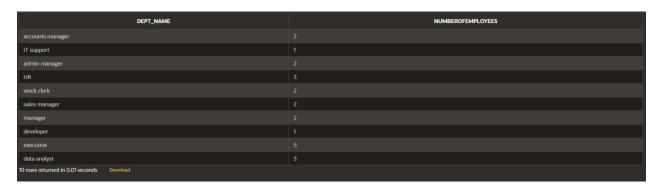

RAJALAKSHMI ENGINEERING COLLEGE | CS23332 | DATABASE MANAGEMENT SYSTEM

by dept_name;	

MAXIMUM	MINIMUM	SUM	AVERAGE
4000	2500	6500	3250
13500	13500	13500	13500
7800	4500	12300	6150
13500	5200	26700	8900
7000	1100	8100	4050
6500	5500	12000	6000
13500	6000	19500	9750
13500	13500	13500	13500
13500	3500	40500	8100

6) Write a query to display the number of people with the same job. Generalize thequery so that the user in the HR department is prompted for a job title.

SELECT d.dept\_name , COUNT(\*) AS NumberOfEmployeesFROM Employees e join department d on e.department\_id = d.dept\_idgroup by d.dept\_name;

7) Determine the number of managers without listing them. Label the column Number of Managers

SELECT COUNT(DISTINCT MANAGER\_ID) AS "Number of Managers" FROM Employees WHERE MANAGER\_ID IS NOT NULL;

8) Find the difference between the highest and lowest salaries. Label the column DIFFERENCE.

select max(salary) - min(salary) as "DIFFERENCE" from employees;

9) Create a report to display the manager number and the salary of the lowest-paid employee for that manager. Exclude anyone whose manager is not known. Exclude anygroups where the minimum salary is \$6,000 or less. Sort the output in descending order of salary.

SELECT MANAGER\_ID, MIN(SALARY) AS "Lowest Salary" FROM Employees
WHERE MANAGER\_ID IS NOT NULL
GROUP BY MANAGER\_ID
HAVING MIN(SALARY) > 6000
ORDER BY "Lowest Salary" DESC;

10) Create a query to display the total number of employees and, of that total, thenumber of employees hired in 1995, 1996, 1997, and 1998. Create appropriate column headings.

SELECT EXTRACT(YEAR FROM hire\_date) AS "yearly wise employment", COUNT(\*) FROM employees
GROUP BY EXTRACT(YEAR FROM hire\_date)
HAVING EXTRACT(YEAR FROM hire\_date) IN (1995, 1996, 1997, 1998);

11) Create a matrix query to display the job, the salary for that job based on departmentnumber, and the total salary for that job, for departments 20, 50, 80, and 90, giving each column an appropriate heading.

select d.dept\_name , sum(e.salary)
from employees e
join department d on e.department\_id = d.dept\_idwhere
department\_id in (20,50,80,90)
group by d.dept\_name;

12) Write a query to display each department's name, location, number of employees, and the average salary for all the employees in that department. Label the column name-Location, Number of people, and salary respectively. Round the average salary to two decimalplaces.

SELECT d.dept\_name AS "Name", d.Location\_id AS "Location", COUNT(e.department\_id) AS "Number of People", ROUND(AVG(e.Salary), 2) AS"Salary" FROM department d JOIN employees e ON d.dept\_id = e.department\_id

## GROUP BY d.dept\_name, d.location\_id;

Name	Location	Number of People	Salary				
sales manager							
data analyst	1700		9733.33				
stock clerk							
HR			8900				
admin manager							
manager			9750				
accounts manager							
executive			6355.33				
developer			13500
